1. GENERAL

1.01 This section provides a cross reference for the literature produced by the Technical Publications Department. Further, it provides a complete list of the material that has been converted to the 9-digit numbering system. There are some bulletins not yet converted, and some that will probably never be converted. This will be true in the case of equipment produced prior to the Model 28 line. Refer to Section 570-000-002TC for bulletins not converted to 9-digit section numbers.

1.02 Part 2 of this publication contains the cross reference of bulletin numbers to 9-digit section numbers. There are also columns for the units involved and the content of each section ; ie, description, principles of operation, parts, etc.

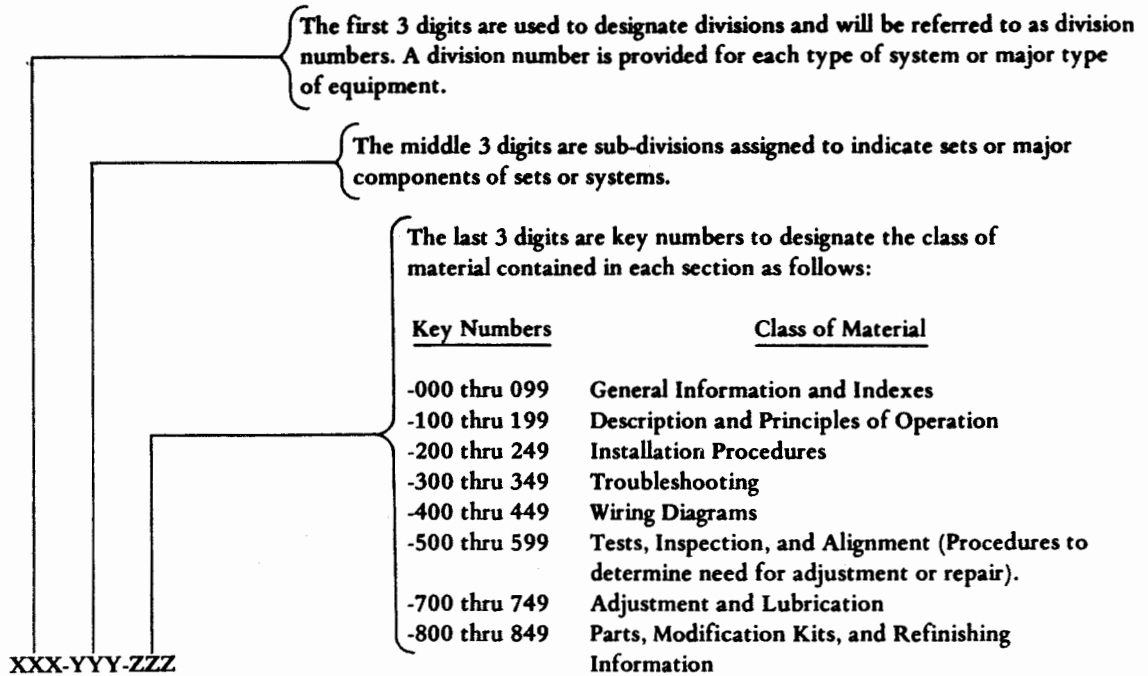

1.03 Part 3 contains the cross reference of 9-digit section numbers to bulletin numbers. The first 9-digit number at the top of each page in this group has a "TC" suffix. This suffix applies to all 9-digit numbers listed in this publication. There are also columns for the issue number and date, description, content, and apparatus code.

SECTION 570-000-001TC

1.04 Part 4 contains the cross reference of apparatus codes to 9-digit section numbers. If bulletin numbers as well as 9-digit section numbers are required, reference should then be made to Part 3 of this section. There is also a column for the unit description of the listed unit code.

1.05 Part 5 contains the cross reference of complete sets to bulletin numbers. If 9-digit section numbers are required, reference should then be made to Part 2 of this section.

Note: Following is an index to the 9-digit numbering system for sectionalized literature.
