TELETYPE model 28 THE LEADERSHIP LINE

SEND-RECEIVE and RECEIVE-ONLY PAGE PRINTER SETS

GENERAL DESCRIPTION

The Model 28 *Page Printer Sets* are designed for use as data transmission terminals in either cross office or cross country record communications. The Send-Receive model provides maximum flexibility for applications requiring both transmission and reception facilities. The Receive-Only model is identical except that it does not have the mechanisms for generating the five level Start-Stop signal.

The *Page Printer Sets* require two external connections: a power feed to a conventional, 115 volt, AC or DC source; and a signal line to interconnect associated equipment. Signal line battery may be obtained from either a remote or internal DC supply. The Typing Unit requires a neutral signal in sequential form, but provision may be made for the acceptance of either polarized or parallel input.

Although a Set's components are available for separate, custom installation, they are normally assembled in either a floor or table model console. For rack mounting a special, close-fitting cover is furnished. A wide variety of optional accessories permit the tailoring of each set for specific application requirements. These accessories may be factory installed or furnished separately.

SEND-RECEIVE KEYBOARD (LK) & RECEIVE-ONLY BASE (LB)

Both the *Send-Receive Keyboard* and *Receive-Only Base* provide mounting facilities for the typing unit, motor, gear bracket and the mechanisms required for local control of the page printer set. Only the *Send-Receive Keyboard* is equipped with the parts necessary for the generation and transmission of a conventional, five level, start-stop signal.

The *Send-Receive Keyboard* or *Receive-Only Base* is attached to a shock mounted cradle assembly in the floor and table model consoles. In the rack mounted set the *Send-Receive Keyboard* is attached to a base plate which is clamped in the printer cover. Design of the cover does not permit use of the *Receive-Only Base*.

Signal and control leads terminate at a 16-point Connector; power leads, from the motor, connect to a 4 point terminal board. Both plug and terminal board are located at the rear of the units.

Typical Key Arrangement

Key Dimensions

COMPARISON CHART

	SEND-RECEIVE KEYBOARD	RECEIVE-ONLY BASE	NOTES
I. KEYS			
Local Control Keys	Space provided for 11 keys are red with white characters.	Space provided for 2 keys are grey-green with white characters.	[illegible]
Transmission Keys	38 including Space Bar. Keys are grey-green with white characters.	none	[illegible]
II. ACCESSORIES			
Operator's Instruction Plate(s)	Standard - 2 plates	Standard - 2 plates	[illegible]
Margin Indicator Lamp Contact	Standard	Optional	[illegible]
Electrical Noise Suppression	Optional	—	[illegible]
Motor Control Time Delay Mechanism	Optional	Optional	[illegible]
III. LOCAL CONTROLS			
Local Carriage Return	Standard	Standard	No signal transmitted.
Local Line Feed	Standard	Standard	No signal transmitted.
Keyboard Lock Unlock (Mechanical)	Standard	—	[illegible]
Keyboard Lock Unlock (Electrical)	Optional	—	[illegible]
Repeat	Standard	—	Continuous character transmission.
Signal Line Break	Standard	Optional	[illegible]

Send-Receive Keyboard — Side view

TYPING UNIT (LP)

The *Typing Unit* contains the mechanisms necessary for translating electrical input signals into printed, alpha-numeric characters or functional control operations ranging from internal print suppression to supervisory control of external equipment. The unit will accommodate friction or sprocket fed paper in single or multi-copy form, either rolled or fan-folded. Typebox or individual pallet substitution is a simple operation requiring little time and no re-adjustment.

The *Typing Unit* is mounted on either the Send-Receive Keyboard or Receive-Only Base and positioned on the locating studs provided. The motor power is coupled through pinion and driving gears to the *Typing Unit's* main shaft. All electrical connections terminate at a 15 point Connector located on the right side frame. An additional plug is available if required.

Typing Unit — Front view

Typing Unit — Top view

TYPE PALLET ARRANGEMENTS

Standard, upper case pallet arrangements are:

- Communications (Punctuation symbols)
- Fractions
- Weather Symbols

Individual pallets, for upper and lower case characters, may be ordered separately for field installation.

TYPING UNIT RIBBON

Style	Black record ribbon—Underwood spool
Length	30'
Width	½"
Thickness	.0058"
Reversing eyelet thickness	.060" min.
Reversing eyelet location	Min. 4" between eyelet and spool hub

TYPING UNIT PAPER

The dimensions of the standard, yellow paper roll, used by many customers on friction feed typing units, are:

Outside diameter	4½"
Width	8.453" ± .031"
Length	325'
Core diameter	1"
Core thickness	.135"

TYPE STYLES AND SPACING

Style	Character Height: Caps	Character Height: Fraction	Horizontal Characters Per Inch: Single - SPACE - Double		Vertical Lines Per Inch: Single - FEED - Double		Actual Type Sample
Murray	.100"	.058"	10	5	6	3	ABCDEFGHIJKLMNOP12345
Gothic	.103"	none	10	5	6	3	ABCDEFGHIJKLMNOP12345
Gothic	.089"	.058"	10½	6	6	3	ABCDEFGHIJKLMNOP123456789
Large Gothic	.120"	.170"	8	5	6	3	ABCDEFGHIJKLMNOP12345
Large Gothic	.180"	.080"	8	5	4	2	ABCDEFGHIJKLMNOP12345

Notes:
a Requires special parts which may be ordered separately. b Special parts also available for Eight line feed and four lines per inch. c Not recommended for single line feed. d Not recommended for 10 characters per inch.

PLATENS

	FRICTION FEED	SPROCKET FEED
Construction	Rubber covered cylinder, fixed to platen shaft.	Rubber covered cylinder, free on platen shaft.
Length	8¾"	Selected for desired form width. (See Below Right)
Paper Width	Any width up to 8½"	Minimum: 2¾" Maximum: 8" (See Below Right)
Characters per line (10 per inch)	Margin is adjustable from 1 to 85 characters	Margin is adjustable from 1 to maximum number indicated on chart.

AVAILABLE ACCESSORIES

Accessory	Notes
Horizontal Tabulation	Available with or without transmitter control parts.
Form Feed Out	Available with or without transmitter control parts. May be used on the following form lengths (in inches): Friction Feed 7(¾), 11; Sprocket Feed [illegible]
Automatic Carriage Return/Line Feed	Cannot be used on certain automatic cutting units.
Auxiliary Connector	An additional Connector — installed next to present one.
Paper Spindle Latches	To secure paper roll spindle and prevent operation in any plane.
Individual Bells	Permits checking unit on either use for maintenance.

NOTE: Certain accessories listed on page 4 (Keyboard) also apply to and require parts for the TYPING UNIT.

AVAILABLE SPROCKET FEED PLATENS

FORM WIDTH IN INCHES	MAXIMUM CHARACTERS* PER LINE	FORM WIDTH IN INCHES	MAXIMUM CHARACTERS* PER LINE
[illegible]	[illegible]	[illegible]	[illegible]

NOTE: a — On a basis of 10 characters per inch.

STUNT BOX

STUNT BOX – Rear view

The *Stunt Box* is installed in the rear of the Typing Unit and driven from a clutch assembly on the main shaft. Forty-two functional control positions are provided. Less than half of these are reserved for specific functions, the remainder may be arbitrarily allocated for desired operations.

Individual function mechanisms may be selected by a single character or upon the receipt of a sequence of characters. The mechanism may be used to control the Page Printer Set and coordinate the operation of remote equipment.

Over one hundred *Stunt Box* arrangements are available as complete assemblies.

FUNCTION BARS

[illegible] — Uncoded ("Universal") function bar

Typical, pre-coded function bar for specific character or condition

FUNCTION PAWLS

[illegible] — To operate associated lever only

[illegible] — Special pawl used in slot adjacent to slot with [illegible] pawl

[illegible] — To operate associated lever plus lever in adjacent, higher numbered, slot

FUNCTION LEVER COMPARISON CHART

Function Lever Selection Purpose / PART NUMBER	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
A. Used with [illegible] Blocking Rod to prevent operation of eight other function levers.										•				
B. Will operate contacts in two, adjacent slots simultaneously.												•	•	
C. Will operate shift slide or contact.	•	•	•	•	•	•	•	•	•	•	•			
D. Will block associated function bar.								•						
E. Will block function bar in adjacent, higher numbered slot.	•					•								•
F. May be latched in operated position.	•	•				•	•	•		•	•	•	•	•
G. May operate a slide.	•	•		•	•	•				•	•		•	•
H. Will Suppress Spacing.			•	•		•		•	•	•		•		
I. May be operated by a releasing rod.								•						
J. May operate a releasing rod.			•				•		•			•		

Composite Function Lever

LATCH RELEASE BAILS AND STUDS

Typical Latch Release Bail — to release from 2 to 12 latches.

[illegible] Stud — to release latch in adjacent, higher numbered slot

[illegible] Stud — to release latches in adjacent, higher and lower numbered, slots

SPRING PLATE AND LATCHES

[illegible] Spring Plate — Function operates for one cycle only

[illegible] Latch — Function lever remains operated until overlaid, succeeding cycle

[illegible] Latch — Function lever remains operated until released by a specific character

SHIFT FORKS AND SLIDES

Standard shift fork assembly using [illegible] fork

Special [illegible] fork for spring loading

Special [illegible] fork for spring loading

[illegible] Slide — Used for operating shift fork with one function lever

[illegible] Slide — Specific [illegible] slide — May be operated by two or two function levers

[illegible] Slide — Used for operating shift fork by one or two, adjacent function levers

[illegible] Slide — Used for operating shift fork by one to four, adjacent function levers

[illegible] Slide — Used for operating shift fork by one to six, adjacent function levers

SWITCH ASSEMBLY

STUNT BOX CONTACTS
Construction

Plastic blocks with slots for a maximum of four sets of contacts. A total of 36 positions are available in this unit for flexibility. Maximum recommended contacts—12

Maximum recommended contact current—1.0 a at 120 ma.

AVAILABLE CONTACTS

FUNCTIONS NOT ASSIGNED TO SPECIFIC SLOTS

- Space suppression for single LF
- Signal Bell Contact
- Busy Light Contact
- Motor Stop Contact

CONSOLES (LAE & LPC)

The components of the Model 28 Page Printer Set may be installed in one of three consoles: The Floor Model, the Table Model or a special, close-fitting cover. Power and signal lines are routed through openings in the rear of the console. In the rack mounted set the lines are connected to terminals in the Electrical Service Unit. In the Floor or Table model the lines are connected either to RF filters, if used, or directly to the terminal boards on the rear wall of the console.

CONSOLE FINISHES

Color	Type	Code
Black	Wrinkle	SA
Gray-Green	Wrinkle	AB
Dark Brown	Wrinkle	SD
Federal Gray	Wrinkle	SE
Black, High Gloss	Smooth	BA
Black, Semi-Gloss	Smooth	BB
Light Gray	Smooth	BH
Federal Gray	Smooth	BV

Special custom colors also available

STANDARD FEATURES

Feature	Floor Model	Table Model	Rack Mounted
Copy Lamps	Two 6.3VAC lamps operating from a 6.5VAC transformer secondary. Located inside forefront of dome. Three position switch permits operation: (1) Continuously on (2) When motor is running or (3) Off.		
Copy Tray	Equipped with a movable copy holder and line guide. Mounted on front of dome or cover.		
Signal Bell	Mounted on underside of console floor. Electrically connected to console terminal board.		Mounted on Electrical Service Unit.
Power Switch	On Electrical Service Unit. Operated by extension arm from front of console.		Available through access panel on cover.
Margin Indicator Lamp	One 6.3VAC lamp. Located inside the dome — right side.		One 6.3VAC lamp. Located inside cover — left side.
Terminal Boards	Two terminal boards mounted on rear wall. Twenty terminals on each. Extra boards optional.		All connections made to Electrical Service Unit.
Cradle	Floor of console. May mount either the Send-Receive Keyboard or Receive-only Base.		Keyboard attached to base plate.
Tilting Brackets	Sides of console. Permit tilting of Keyboard (or Base) and Typing Unit for inspection.		Cover removable from base plate for inspection.
Storage Space	Behind lower panel. Panel cover may also be used as maintenance tray.	none	none
Leveling Feet	Bottom of console.	none	none

CONSOLE ACCESSORIES

Directory Holder	Base Line Indicator Lamp	Paper Winder Mounting Bracket
Offset Copyholder	Note-Out Alarm	Shock Mounts
Apparatus Mounting Rack	Paper Supply and Accumulating Shelf	Sprocket Feed Paper Guide

MOTORS (LMU)

MOTORS AVAILABLE

Characteristics	Synchronous Motor	AC/DC Series Governed Motor
Speed (RPM)	3600	3600
Horsepower	1/30th	1/20th
Voltage	115VAC ± 10%	115VAC ± 10%*
Start Current (AMPS)	9	1.75
Run Current (AMPS)	1.85	1
Frequency (Cycles/Second)	60 ± .75%, single phase	50-60, single phase
Power Consumption (Watts)	65	98
Power Factor	.30	.80
Heat Dissipation (Watts)	50	75
Rotation	CCW from fan end	CCW from governor end
Additional Features	Thermal overload cutout	Adjustable governor

Note: *—Governed motor will also operate on 115VDC, with external resistance.

Synchronous Motor

Series Governed Motor

ELECTRICAL SERVICE UNIT (LESU)

The *Electrical Service Unit* serves as the concentration point for the Page Printer Set's electrical connections. In addition to the line fuse and convenience receptacle, the *Electrical Service Unit* provides terminal boards and mounting facilities for optional sub-assemblies.

The unit is installed, in the Floor and Table model consoles, behind the Keyboard or Base. In the Rack Mounted Set, the *Electrical Service Unit* occupies a separate compartment.

COMPONENTS AVAILABLE TO MOUNT ON ELECTRICAL SERVICE UNIT (LESU)

A. Line Shunt Relay: The signal line is coupled, through the contacts of this relay, either to the Line Relay or directly to the typing unit's selector magnets. When motor power is removed, the relay deenergizes and maintains signal line continuity while bypassing the local unit.

B. Line Relay: Utilized to reduce the effects of line distortion or to convert a polar signal to the neutral form required by the typing unit's selector magnets. The relay has two windings. One operated by the signal line and the other by a local DC source. If a polar signal is applied, only the main winding is used. In either case, movement of the armature applies local DC to the selector magnets in response to a MARKING signal line condition.

C. Line - Test Key: Permits shunting of the signal line for independent operation of the set. The assembly may be wired to shunt either 20MA or 60MA from the local DC source. An additional set of contacts is included that may be utilized to provide audible or visual indications.

D. Motor Control: To provide simultaneous control of all motors in a circuit. Two assemblies are available.

(a) Electromechanical: Stops motor when function box contact is closed (usually on [illegible]) or when a time delay mechanism on the keyboard or base responds to an idle line condition.

(b) Solenoid: (Can not be used on DC motors without adequate spark protection).

(1) In separate loop. All motors stop when loop is operated (Battery either applied or removed).

(2) In signal line. All motors stop when signal line current is reversed.

E. Rectifier: Two rectifier assemblies are available. One is rated at 120MA, the other at 300MA. Both assemblies provide 120VDC from an input of 115VAC (± 5 volts) 50 to 60 c/s. The output of the rectifier is normally utilized in local circuits such as the typing unit's selector magnets, the Line Relay's bias winding and the Line Test Key Assembly. For use within the set, the 120MA rectifier is usually adequate. The 300MA assembly is offered for special applications where supply of external equipment is desired.

F. DC Conversion: A capacitor-resistor assembly to permit operation of such local components as the series governed motor or the Line Test Key Assembly from a direct, DC source. The assembly would be installed in the position normally occupied by the rectifier.

G. Signal Line Limiting Resistance: Either a fixed or variable resistance to limit the signal line to the requisite 20MA or 60MA. The variable resistance (rheostat) would be installed in the position normally occupied by the Line Relay.

INPUT SIGNAL SPECIFICATIONS

1. Sequential (5 intelligence levels with Start and Stop pulses)
   a. Neutral: Selector magnets may be directly connected to the signal line.
   b. Polar: Line Relay is mandatory.
2. Parallel
   a. Neutral: An accessory multi-wire distributor unit (LD) converts a parallel wire input to the sequential form required by the selector magnets. The distributor has seven contacts:

Five—Intelligence Levels
One—START—STOP
One—Control (Aux.)

SELECTOR MAGNET SPECIFICATIONS

Connection to Signal Line or Line Relay	Resistance	Inductance†	Recommended Current
Series	250 ohms	6 Henrys	20 MA
Parallel	60 ohms	1.6 Henrys	60 MA

† Approximate values — Measured on a 60 basis with magnet unattracted
