**From The Editor  
and  
his Mail**

Well the Santa Maria ARRL Convention  
is now past history. We are glad to  
report that one of our local club members  
Frank Iversen WA6ZCQ was able to  
walk away with the third prize. Frank  
won the Highgain all band antenna, con-  
gratulations Frank.

Chuck W6MNO and myself attended  
the convention together and had a great  
time even tho I was hobbling around  
on a broken foot that I had acquired  
the Sunday before playing football with  
my overgrown kids and their friends  
that were visiting from out of town.

We are slowly getting set up in the  
foreign countries with people to handle  
the re-distribution of the Journal. This  
is going to make it possible for all  
countries to get airmail service at a  
reduced rate (about the same as former  
surface rates).

The band has been open to Europe  
for the past week and we have printed  
many of the countries. At the present  
we are in the middle of remodeling  
some of the equipment in the shack  
and re-arranging things so we will  
be able to spend more time (on the air)  
but our first love is building so we spend  
many hours at that. We do try to  
keep active on the local repeater (RTTY)

We also want to keep thanking those  
kind persons that keep writing us and  
letting us know how they enjoy the Journal  
and also those few that would like to  
have us change things.

For a couple of fellows that wanted  
more "real technical articles" we hope  
that the article starting this month -  
pleases them. It is a very well written  
article and not for the beginner but  
don't you beginners worry there will  
be lots for you.

We also wish to thank Gary Buda  
for his fine bibliography starting from  
Jan '59 to Dec. '75.. we have a copy  
and it is well worth sending for.  
Red of course has the complete prints  
of the Journal from day one  
with this service you can have a re-  
production of any article that has  
appeared in the Journal.

We also wish to apologize to all  
the fellows that have ever tried mobile  
RTTY after many letters I re-read  
the article that Chuck had written and  
sure enough he had omitted the fact  
that he was referring to our local  
repeater and area...So sorry about that  
fellows.

C U next time de W6KCW Don.....

Many ideas grow better  
when transplanted into  
another mind than the one  
where they sprang up.

# VHF RTTY NEWS

**CHUCK EDWARDS W6MNO**

4726 Barbarossa Drive - San Diego, CA 92115

Greetings to all. Things are really starting to look up. We have received several inputs from our readers. One from Wade K4YSB, who is trustee of WR4BAG and Smitty, K4ZXV of the same group. WR4BAG is situated in the Stone Mountain area near Atlanta, Georgia. Wade in his letter furnished a very apt description of their repeater, which I will include as part of this column. I noticed that CW is not passed thru the repeater circuitry. Must be that they are filtering out all else other than the 2125/2295. Actually the UART system being used would clean up any signal getting into the OR thru the filter system and output the signal distortion free. The description sounds like one used by S.C.A.T.S. in Southern California, although they have added a pre-amp made by Janel, to the input circuit that really has picked up the sensitivity considerably. This Janel unit builds up the signal level 22 db, while adding only about 1 1/2 db. noise. Others may want to experiment with this Janel unit. It costs \$19.95 Dollars in the QST mag IR ad.

A group of RTTYers in the San Diego area are discussing and designing a 220 repeater that will operate on 223.10/224.70. A VHF engineering transmitter and receiver with COR has been donated by W6RUL, Ray. A set of brand new cavities has been donated by Don, WA6MJZ., AND WA6CYA plans to donate a ST-5 terminal unit and small but not forgotten, is a set of crystals from yours truly. W6KCW, Don is busy getting all of these goodies together and getting the packaging and circuitry all straightened out in his fertile mind and will soon come up with the systems concept combining them all into a workable repeater. This group will soon form a San Diego Club.

220 VHF has proved to be a very interesting frequency. W6KCW and I have experimented with it versus two meters and found, almost without exception, that 220 will out perform two meters. We have each installed a ten watt, two meter and 220 rigs with 5/8th Larson mobile antennas cut for each frequency in our cars. We then started traveling in opposite directions to see which signal would 'pop out' first. These tests have shown, under these conditions, that 220 will give readable copy at least one third the distance more than two meters will. If any of you have had any experience or run tests along these lines, it will be appreciated to learn of your results. In addition, any experience with 220 repeaters will be welcomed.

By the time you read this the G8 CDW VHF Contest in England will be history. We will anxiously await the results of the contest from Ted. We have mentioned it before BUT one of these days I hope to see us having such a contest also. It would be arranged and managed by the JOURNAL. If you fellows will write in and tell us that you would like to have one here in the States and give us your ideas on what criterias should be used, I personally, will be new at VHF contest operation and will really need information on what the contest should concern. By that I mean what do we measure? The distance run, number of contacts, number of states or counties or what?

The following is quoted from WR4BAG as furnished by the Stone Mountain group; 'the WR4BAG regenerative radio teletype repeater was developed solely for the RTTY mode of operation and features the following: (1) 147.105 input frequency, 147.705 output frequency. (2) Access - transmission of a few valid

teletype characters, (3) shift - 170 cycle shift using standard 2125 mark and 2295 space signals. (4) repeater I.D. - repeater identifies itself as a RTTY repeater via a tape announcement machine on voice. (5) speed - initial provision is for 60 wpm.

In operation the WR4BAG repeater looks for valid RTTY characters on its input frequency and finding these characters turns itself on. Regenerative operation is provided whereby the input signal is decoded and recreated into a perfect signal for transmission. Only a teletype signal will flow through the repeater.

Equipment is housed in a four foot slope front, rack on rollers and consists of the following components: (1) Lambda commercial voltage regulated current limiting 12 V.D.C supply for receiver, transmitter and amplifier. (2) solid state transmitter. (3) solid state receiver. (4) KLM 70 watt class C solid state amplifier. (5) terminal unit - st-6 type design tuned for 2125 mark-2295 space. (6) regenerator - UART G.I. AT-1013. (7) 60 wpm UART clock - crystal derived. (8) AFSK - CRYSTAL derived time base, generates sinusoidal, phase coherent, 2125 mark, 2295 space. (9) control circuitry - TTL digital logic. (10) identifier - solid state commercial tape announcement machine. (11) logic supply - 12VDC, -12VDC, 5VDC. (12) RY test generator - commercial solid state.

R.F. equipment is properly shielded and by-passed with feed-thru capacitors. Converter, AFSK, clock, regenerator, and control logic are individual circuit boards housed in a card rack. All equipment is conservatively rated and adequately cooled.

Operating notes: (1) if a station is copyable at the repeater, his regenerated signal will be perfect regardless of whether his actual signal is or is not. (2) the repeater will not pass your C.W. I.D. but to be legal, you must send it. (3) voice I.D. of the repeater will not garble print if your converter is adequate.'

A letter from N3AI, Neal also offers a description of his repeater. It follows: 'This repeater club S.A.R.A (Schuykill amateur repeater association) has

voted at a recent meeting to allow RTTY on our second machine (which is primarily used for auto-patch). We are running RTTY for one hour three nights per week as an experiment. This is the pre-auto start experiment period; for the benefit of non-rtty operators. We plan on auto-start soon. At the present time we use only standard 2125/2295 shift, 60wpm, from 8 pm to 9pm Tuesdays, Fridays and Sundays. All stations are welcome to join us either in a round table or just to print us if they do not have transmit capability. We hope this will grow to a 24 hour auto-start/auto-patch repeater but it will only do so if we can show to the rest of the club that we have enough Hams interested in using auto-start. This should be no trouble as the machine has an easy 60 mile radius and is on 147.956 input/147.345 output.'

CUL 73 W6MNO

"You're right about the music helping me think. I've been sitting here all day thinking of the words to all the songs they're playing."

**SKIP PRINSEN WB6CYA**

3611 Merrimac, San Diego, Calif. 92117

GREETINGS TO ALL.....

As I sit here at my desk putting this article together (with tears in my eyes), THE BAND IS WIDE OPEN FROM THE band is wide open from the mid-west and east coast of the USA, into Europe with the guys working OZ1, DK8, DK9, G4, DM5, and DE3, I sure wish that I was back there now. Yesterday the east coast was working ZS6 EA8, DJ9, I0, IT9 and F9 so the band is back in there. One European station made the comment that 'the band had been dead for 10 days'.

EA8IY, Fernando on the Canary Islands is very active around 14.095 at various times. His address is: Fernando Molina Herrero, Observatorio de Iyana, Tenerife, Canary Islands.

Tony, K3BHL who was active from CP1AP, CP1JV and XW8HJ is now home from HI8XDF and should have RTTY gear on shortly. His QSL manager is K3SWZ Glenn Kuryenkabe, 403 Center-view Ave., New Cumberland, PA 17070. Glenn also reports receiving his QSL card from JX2FL which came via the bureau (thanks Glenn).

Fred, CX7BZ from Montevideo reports the possibility of a return of an FR7 station on RTTY from Reunion Island. The last time FR7 was on was in late 1971 when Roland FR7AB was active.

Due to low activity on the band until the last two days that is all of the DX activity that we could find. On other bands Ray WB8SGM/7 is very active on 40 meters 7.095 each evening around 0300 GMT or so. Ray is located in Bellevue, Washington state and says that he is on a one man crusade to scare up more activity on that band.

From John, W3KV as he says 'a few things to fill in some of the blank spaces' DX of the month. 7X4MD - Driss QRV on 5 September had a glitch

on his space signal but is OK now. Has been very active around 18-2000 UTC daily. Very strong when his beam is state-side.

A9XCC Jim in Bahrain has a FB signal and QSL via K4CG. Also active is A9XBD (see back issues for QSL info). We hear that A9XCE may soon be active also.

OD5JW the first station printed from there since the end of the shooting war. It so happens that it is Wassim, who was operating as JY4JW a few months ago.

JY5KR is a new one from Amman. His name is Khalid and uses an Atlas transceiver!! From time to time Blackie, JY9BB shows up on the band.

A4XGB, Sid is again QRV. His job took him out into the desert for a few months. But he now has gathered some gear so you will hear him a lot from now on. Robert, A4XFW is still active and it will help greatly if you can speak German.

FR7ZS, Michel on Reunion Island is active QSL via F5DV on long path to the USA around 1200 UTC.

In general 3A2CR, Bob made an appearance again from Monaco. VK2BAB is a club station with many ops - mostly on the keys are Rita (YL) and Arthur. GM3SWK & GM3KHH are QRV from Scotland. IK50ARI commemorates 50th Anniversary of ARI of Italy. FG7XT, Jean is quite active again. IS0NUP, IS0WWL, IS0ESS and IS0RFS are all active now from Sardinia. IT9JKY and IT9WPN are new on from Sicily, CT1 WA and CT4CK are on 50 band.

CT1EQ, Bern is QRV again after a few months of being off the air. G3 PNH, G3XTZ, G3HKC and G4DFX are new calls from the UK. OF6YI is a new prefix but counts as Finland (OH). ZS6RAU via long path to the east coast at 1200 UTC with 'JOOP' as the op

DX cont.

and Stu at Afrikaan University in Johannesburg.

FOR THE FUTURE We hear that EA 6BG has a machine and Willi, DL8KS is trying to get an ST5 to him this will be a first from Balearic Island. HI8XDF will try to activate RTTY from Haiti in the near future, Thanks John.

Yesterday the first of October I printed WA3UMI working WA4NYC/5 with very strong signals, so while writing here I tuned down on 21095 and lo and behold there was Robin G8LT calling a CQ so had a short chat with him and found out that they (the Europeans) are experiencing the 'woodpecker' interference that has been seen on the 20 meter band. Following this contact I printed DK8GT calling a CQ but wasn't able to raise him. Presently, W8CAT Dick in Michigan is working DJ4MH which I can't print here.

Now on to the contest scene. By the time you have received this copy of the JOURNAL the C.A.R.T.G. will be past history, coming up the 22nd thru 24th of October. Then following several weeks later on November 12th & 13th the D.A.R.C. sponsors a European DX contest. Details of these events have been published in the September issue of the Journal. Elsewhere in this issue you will find the info on the 13th Alexander Volta RTTY DX Contest running December 3rd and 4th.

This next years B.A.R.T.G. Spring Contest is the 25th thru 27th of March which unfortunately happens to be the Easter week-end. This was forced on us as there are two ARRL contests and the Commonwealth CW Contest on each of the other weekends in March, and by custom and practice B.A.R.T.G. has always been on the 4th week-end. Please ignore any rules for previous contests as there will be several changes which recent events have made necessary.

DXCC #27 was issued on 21st September to OK1MP, Milos Prostecky.

A final reminder to everyone that the DX Honor Roll will be printed next month so those of you with new up dates or sending in for the first time

and waiting until the last minute the mail from Europe takes about 7 days air mail, the same from Australia so plan on 10 days to be safe. My news deadline is the last day of the month for the following month. In other words news getting to me by the last day in October will make the December issue.

To assist me in keeping up with who is active from the various countries and on what band, if you would help me sending in your QSL cards for DXCC, have them in Alphabetical order and on a separate list also give the following for each contact: call, country, date, band and RST. This would help me greatly. Thanks.

13th ALEXANDER VOLTA RTTY DX CONTEST RULES:

TEST PERIOD: Saturday, December 3rd, 1200 GMT to Sunday, December 4th, 1977 1200 GMT. I2LLO will transmit a special message for 10 minutes at 2350 GMT Saturday, December 3rd on 21.100 MHZ (300 watts, omnidirectional antenna, 170 Hz, 45 bands). A special prize will be forwarded to each amateur who submits a copy of this message. BANDS: All amateur bands 3.5 to 28 MHz. EXCHANGE POINTS: All two-way RTTY contacts between stations of the same country are not valid (count for zero exchange points, zero multiplier and zero QSO). All two way contacts with station in own zone will count for two points. All two way RTTY contacts with stations outside your own zone will count for points in accordance with the exchange points table. The two way RTTY contacts made on 7 MHz are worth double the count and on 3.5 or 28 MHz are worth triple the count.

CONTACTS: Stations may not be worked more than once on any band. Additional contacts may be made with the same station if a different band is used. MULTIPLIERS: A multiplier of one is given for each country contacted. The same country may be claimed for extra multipliers if a different band is used. SCORING: Total exchange points times the total number of multipliers times the total number of QSO's. Italian bonus points added last of 1000 points for each I/S/IT contact on each band.

## VOLTA CONTEST CONT.

**COUNTRY LIST:** ARRL country list. Each USA, Canadian and Australian district will be considered a separate country.

**MESSAGE:** Message number RST and zone.

**LOGS AND SCORE SHEETS:** Use one log sheet per band Log forms, score sheets and exchange points table available for IRC's. Logs must be received before 20th of January 1978 to qualify (It is advisable to use air mail). Send logs and score sheets to: AV RTTY DX Contest Committee, SSB & RTTY Club, P.O. Box 144, 22100 Como, Italy.

**SWL ENTRIES:** This contest is open to SWL RTTYers. The same rules apply

as are used for transmitting stations and a separate result table will be made for these entries. Logs must contain: Band, time GMT, CALL sign of station heard, number sent by that station and exchange points.

**AWARDS:** 1. US & Foreign Callbook & Silver Plaque.

2. Foreign callbook & silver plaque.

3. teleprinter handbook

4. 1 yr. subscription to RTTY JOURNAL

5. 1 yr. subscription to RTTY JOURNAL

6. 1 yr. subscription to RTTY JOURNAL

**High Score SWL :** The radio amateur handbook (ARRL)

World Championship; Points and positions achieved in this contest will be valid for inclusion in the 'World RTTY Championship' for 1977.

## AUTOCOM MA4

K9WRL

Neil Petlock

104 N. Emerson Street  
Mount Prospect, IL 60056

### INTRODUCTION

The Autocom presented here is the product of four different designs from the original idea. From the start we wanted a modular design that could be expanded, hence we are presenting it in a board by board description.

The Autocom MA4 consists of four basic boards and requires a +5, -12, +12v power supply. A fifth board (XB-6 clock) is available. This article will deal strictly with the four Autocom boards and the supply. The four boards are listed in order of need: UT2/parallel generator, memory board, decode board, and interface board.

The main goal of the Autocom is to provide selective calling, i.e., your call up to 8 characters or functions, (in our case ↓ K ↑ 9 ↓ WRL was used), ↓ NN NN shut down, and a method of selecting in different functions. The function in our case are the ability to turn on and turn off the punch, the ability for another station to call in and turn on a precut tape to be sent back to him, to select in CW ID, and to select an answer back. The selection of the functions will be explained later in the board descriptions.

**UT2/Parallel generator/clock.**

Basically this board is a rehash of Irv Hoff's UT2\* with a few additional options. A UT4 board with the same options has been laid out at this time, but has to be tested. (one board UT4).

The UT2/UT4 systems are used so one may start with the UT series and add the Autocom when desired, giving increased flexibility and utility. One option added to this board is the NE555 clock which may be used to clock both input and output at the same speed. This is accomplished by breaking a direct foil lead from pin 40 of the UART to pin 3 of the NE555 ( this lead is used for a receive only system) and connecting terminals A,C, and 17 on the edge connector\*\*together, or by connecting just A and 17 together. The NE

555 may be used to supply one speed to the input clock(printer) and an XB6 clock\*\*\* may be used to supply the input speeds to pin C.

The second addition is the two 7417 chips which are used to supply and buffer the parallel buss as only one TTL load is specified for the UART outputs.

The third addition is the extended use of pin 24 of the UART. The 7407 acts as an inverter/buffer. Using the low going pulse from pin 24 we were able to devise a transitional auto start system with the use of one chip, the 74122. With this resetable one shot we use the first low going pulse of pin 24 to start the one shot timing. The 15K resistor and 1000MF capacitor give us a timing of about 30 to 35 seconds. As long as we get continuous transitions from pin 24 of the UART, Q2 will remain on, and it will be used to drive a 12 volt relay for autostart purposes. If no transitions are sent for 30 seconds the 74122 is allowed to reset and turn off Q2. Pin 24 also supplies clock pulses for the counters and clock pulses for the 7475's.

IC6F is used to drive a signal lamp on the front panel and will follow the mark-space from the output. This will allow you to see if anyone is using the frequency.

**Memory Electronic Board**

This board is the heart of the Autocom system. The incoming signal is compared to the call stored in two H8256 proms. The exclusive nor gate (74L S266) looks for a match, high or low, to keep a low output on pin 8 of the 7430. This same point is tied to the reset pins of the 7493 counters. A 47UF capacitor is placed there to eliminate any sliver pulses. Without these capacitors the counters would be allowed to reset each time even if sequence was followed. IF sequence is followed the counter (0-7) steps the prom. Once full sequence is achieved, pin 6 of the prom goes high and allows pin 3 of IC 13A to low, thus forcing pin 11 of 13D to go high. This point will be used to start your printer.

At the same time the 74157 multiplexer IC17 is forced to look at the second 7493 counter (8-15) and disable the first counter. The prom is coded

## AUTOCOM MA4 cont.

here for letters NNNN combination to shut the system down. Once this sequence is met, pin 7 of the H8256 goes high and forces the flip flop to reset thus shutting off the printer and resetting the counters to start count position. Pin 2 of IC12A is tied to a 30 second timer for auto-shutdown under the following conditions: 1. loss of carrier. 2. the letters NNNN not transmitted. 3. tape jams during the transmission.

The clear pulse is obtained from a 74122 located on the UT2 board (also used for autostart) or from a 741 located on the interface board. The interface board is used in a full Autocom system and the 74122 would not be required on the UT2/parallel generator board. IC14 and IC11 form a 2 second clear on power up. Proms were used over rams to allow the system to remain off (AC off) until started by the auto-

start in your TU. This is a power saving feature if you already have autostart.

The second H8256 is used to detect the figs blank code for allowing other functions to be used. The only difference here from the call up prom is the addition of IC16 which is used to allow a throw away character in the prom before anything else is reset. Thus our prom count would read 0000 figs, 0001 blank, 0002 decode - any character and 0003 which is reset counter. The 0002 position allows the characters precoded on the decode board to be looked at by the prom, i.e. figs blank A or figs blank K. Only one will be allowed to select in on each figs blank sequence received. IC16D allows this to be selected in only after a valid call up has been selected in.

IC1 and IC2 are used as buffers to permit the use of a second memory board for selecting in something else on another call up. 7475 buffers are employed on the decode board.

- A. To high when received from T,U.
- B. To interface board "V"
- C. T clear switch
- D. Not used.
- E. To interface board "E"
- F. Not used.
- H. To UT 2 board "R"
- J. To UT 2 board "S"
- K. To UT 2 board #2
- L. Plus 5 VDC
- M. To UT 2 board "T"

- N. To UT board "U"
- P. To UT 2 board "V"
- R. Not used.
- S. Not used.
- T. Not used.
- U. To UT 2 board #2
- V. To decode board "K"

- 1 thru 17 not used
- 18. Ground.

UT 2/parallel generator edge connector connections.

### Foil side

- A. Second clock (printer)
- B. To AFSK input
- C. First clock (line)
- D. To ST 6 FSK line
- E. To switch for one or two stop bits. (short to ground for two)
- F. To one side external timing\* resistor for printer clock
- H. To other side of external timing resistor selection switch
- J. Plus 5 VDC
- K. Minus 12 VDC
- L. Ground
- M. Data line #8 (not used)
- N. Data line #7 (not used)
- P. Data line #6 (not used)
- R. Data line #5
- S. Data line #4
- T. Data line #3
- U. Data line #2
- V. Data line #1

\*The timing resistors may be changed via a switch to vary the output of the printer clock

### Component side

- 1. To autostart relay
- 2. Not used
- 3. Not used
- 4. Not used
- 5. Not used
- 6. To FSK in transmitter
- 7. To transmit side of RT switch or RT relay
- 8. Plus 12 volts DC
- 9. To output loop keyer for rec.
- 10. To rec. side of RT switch or RT relay
- 11. To signal LED on front panel
- 12. Not used
- 13. Not used
- 14. System clock, to pins "k", "U", memory board, to #2 decode board, to "A" of interface board
- 15. Inverted clock output (not used)
- 16. To UART input - rec.
- 17. To second clock input \*\*
- 18. To switch for required stop pulse option

\*\* Use for rec only system. Foil should be broken away from pin 40 of UART and a strap added from pins 17 to A. A strap is also added under the UART to pins 6 and 11 of IC2. A provision for this has been added to the board just under pin 20 of the UART.

The following letter is from Guglielmo Marconi's daughter.

To The Town of Barnstable Radio Club of Cape Cod.

I was delighted to learn, from Mr. Robt. Doherty, that you planned to celebrate the 75th anniversary of the first two way radio transmission across the Atlantic, by my father Guglielmo Marconi in 1903, with a number of amateur radio transmitters operating from the original, Marconi Station in South Wellfleet, during the month of January 1978.

This is truly welcome news and needless to say I support your undertaking most enthusiastically and would be very pleased to contribute in any way I can to this celebration. Radio Amateurs were always closest to my father's heart. He considered them part of his 'spiritual' family and he never tired of being in touch with them, and sharing their problems and their achievements. So by turning peoples minds

back to the magic of radio in the early days, to the picture of my father and his assistant - earphones glued to their ears listening intently for those faint and distant signals from across that wide -- wide -- ocean ..(today when talking to the moon seems common place) you will be rendering a service to us all by restoring an Historical Perspective to this wonderful means of communication.

By focusing people's attention on the struggles, the incredible faith, the vision and perseverance of these pioneers, it will become poignantly evident that what is taken for granted by so many of us today was an incredible feat of human ingenuity 75 years ago.

I look forward to hearing from you on the progress of your project. Please accept my heartiest congratulations and all my best wishes for a very succesful celebration.

sincerely yours  
Mrs. George A. Braga

**Info-Tech Model 150  
RTTY KEYBOARD**

Features 4 speeds with 3 shifts  
AUTOMATIC CRLF with 72 Character Line, 64 Character Running Buffer  
Three Outputs: Loop, AFSK Audio, TTL/Mos Serial

Price - \$289.00 ..... F.O.B. St. Louis

## More Economical RTTY

## The ST-5000 from HAL

The HAL ST-5000 sets the pace for an economical demodulator/keyer for radio-teletype (RTTY). All the features you need for reception and transmission of HF and VHF RTTY are here.

The demodulator features a hard-limiting front end, active filter discriminator, and active detector circuitry for wide dynamic range. Autostart and motor control circuitry make for easy VHF and HF autostart operation.

Convenient front panel switches are provided for 850 and 170 Hz shift, normal or reverse sense, autostart on/off, print - line or local, and power on/off. 425 Hz press transmissions may also be copied with the ST-5000. High voltage 60 ma. loop output as well as low level RS-232 compatible output are provided by the demodulator.

The audio keyer section of the ST-5000 generates stable, phase-coherent audio tones. Transmission is a simple matter of applying these tones to your HF SSB or VHF FM transmitter.

The ST-5000 is housed in an attractive blue and beige cabinet and is backed by the HAL Communications one year warranty.

For complete specs on the HAL ST-5000, write or call HAL today.

**S-100 extender boards.** Heavy duty construction, guaranteed for the life of your computer \$19.95 postpaid. MLT Systems, P.O. Box 1522, Canyon Country, California 91351.

**BE INFORMED**- Electronic junk mail, 1 year \$1.50 The Junk Box Fall Issue, \$1.50. Box 872, Peabody, Mass. 01960.

**RM-300, THE COMPLETE TU and AF-SK generator on one board.** Your CW ID generated from on-board PROM. Thinking of VHF RTTY through your local repeater? This premium quality board is ideal. Complete documentation \$2.00. RM-300 board just \$21.25.. Complete RM-300 kit less PROM \$71.25 PROM programmed with your call \$7.00. RP-400 power supply (plus 5v. & plus and minus 12v. and dual loop supply) board only \$21.25. Complete kit with heavy duty transformer and solid state autostart relay \$71.25. Calif. residents add 6%. Postage and handling \$1.00. Eclipse Communications, 5 Westwood Drive, San Rafael, CA 94901.

**DOVETRON TSR-200 teleprinter speed converter-signal regenerator** is a 5" by 5" card designed as the digital heart of the MPC-1000CR terminal unit. May be simply interfaced to other tms. Consists of programmable UART regenerator, dual crystal controlled clock and a CMOS bilateral steering section. Power requirements: 5/15 volts at 20 mls. Price \$99.50 postpaid. Add \$15.00 for front panel BCD speed switch and cable. DOVETRON, P.O. Box 267, South Pasadena, CA. 91030. 213-682-3705.

**DOVETRON TBA-1000 BAUDOT-ASCII code translator** permits an ASCII teleprinter (model 33,35,etc.) and the Heath H-9 video terminal to be used directly with any terminal unit on Baudot RTTY circuits. The TBA-1000 may also be used to interface a 5-level Baudot teleprinter directly to ASCII circuits, such as a microprocessor. When using an ASCII video terminal, hard-copy may be had simultaneously on a Baudot printer. In addition to signal regeneration, speed conversion and 192 characters of FIFO memory, direct keyboard control of the companion terminal unit and transmitter-receiver is also provided. Price: \$245.00 FOB. Delivery: November 1977. Complete specifications are available on request. DOVETRON, P.O. Box 267, 627 Fremont Avenue, South Pasadena, CA 91030. 213-682-3705.

**DOVETRON STATION IDENTIFIER TID-100** may be programmed in Morse CW, Baudot or ASCII codes. Output speed is variable from 5 to 20 WPM (CW) and 60 to 100 WPM (Baudot/ASCII). Two LEDs indicate CLOCK RUNNING and CODED OUTPUT for easy visual verification of programmed code. Dual output: One drives FSK/AFSK line and the other may be used to drive front panel indicator. Mounts inside of Dovetron MPC Series terminal units. Requires 1 Ma at 12 volts. Price: \$39.95 postpaid. DOVETRON, P.O. Box 267, South Pasadena, CA 91030. 213-682-3705.

**HAL DKB 2010 DUAL MODE keyboard** with 128 character buffer memory. Excellent condition. \$350.00. Wayne, W8 GXB, (616) 772-9236, 263 South Division, Zeeland, MI 49464.

FOR SALE: Complete set of reprints of the RTTY JOURNAL. Volume #1 to date. These are in book form same as originals. Brand new mint condition, ideal for the person who wants to know all about RTTY. Price complete including shipping, \$125.00. Ralph H. Wilson, 4011 Clearview Drive, Cedar Falls, IA, 50613. WBØESF.

P2102 MICROPROCESSOR IKX1 memory chips tested good. \$1.00 each. Joe Young W6RLL, 16808 Goodvale Road, Canyon Country, CA 91351. (805) 251-2135.

**ELECTROCOM SERIES 400 FREQUENCY SHIFT CONVERTERS** are now available to the amateur. Outstanding performance, high reliability and quality construction, for which Electrocom equipment has been known for more than 17 years, is maintained by conservative design and quality components throughout. The Model 400 contains continuously variable shift which is adjustable by a 10 turn front panel control. Shift is accurately displayed by an in-line 3 digit readout. A range switch selects high or low tone combinations allowing use on both SSB and AFSK systems. The Model 402 contains individual Mark and Space frequency controls. Matched filters, baud rate selection, and precision linear detectors provide optimum demodulation. Input frequencies over the range of 1000 to 3200 Hz. are accepted. Other features include autostart, mark-hold, antispace, waveform symmetry corrections, solid state motor switching and adjustable bias correction circuitry. The loop supply is variable from 20 thru 60 mils. and maintains constant current over a wide range of loop resistance and line voltage. The 2 inch CRT tuning indicator/monitor contains automatic intensity control and blanking. Direct factory introductory price range \$690.00. FOR complete details and specifications write or call Electrocom Industries, 1105 N. Ironwood Drive, South Bend, Indiana 46615 219-232-2743..

KLEINSCHMIDT teletypewriter TT-4A 60 or 100 WPM. Ideal for field service Suggest 60 WPM for best service. Has additional outside protective cover for rough service. Checked out and working. \$59.95. W.F. Harmon, 5628 10th Ave. So. Birmingham, Ala. 35222 (205)592-0835.

PRESCALER KITS good to 300 MHZ complete with all componets. Has post-amp for better sensitivity board measures 1-1/2 x 2 inches will fit inside most counters.

Kit \$14.95 assembeled \$21.95..... Order %RTTY Journal P.O.Box RY Cardiff by the Sea, Calif. 92007.

# DOVETRON

**MPC-1000C**  
Multipath-Diversity  
Amateur Net: \$495.00

The MPC-1000C features MULTIPATH CORRECTION, IN-BAND DIVERSITY (single channel copy during deep selective fades) Operation and a PHASE-CONTINUOUS AFSK TONE KEYS. The Mark and Space channels are CONTINUOUSLY tuneable from 1200 to 3100 Hz. The internal RY GENERATOR and DUAL-MODE AUTOSTART (FSK or MARK) are standard, as are rear panel provisions for SIGNAL REGENERATION and SPEED CONVERSION peripherals.

**MPC-1000CR**  
Signal Regeneration & Up-Down Speed Conversion  
Amateur Net: \$595.00

The MPC-1000CR combines all the features of the MPC-1000C with the TSR-200 SPEED CONVERTER-REGENERATOR. A front panel SIGNAL SPEED switch provides electronic "gear-shifting" between 60, 66, 75 and 100 WPM speeds. All incoming and outgoing signals are regenerated by a CMOS UART and a crystal-controlled DUAL-CLOCK to less than 0.5% bias distortion, providing an extremely low error-rate on weak and badly distorted signals.

**MPC-1000R**  
Dual-Uart Regeneration,  
200 Character Fifo  
Memory & Word Correction.  
Amateur Net: \$820.00

The MPC-1000R combines the features of the MPC-1000CR with the TSR-500 SPEED CONVERTER-REGENERATOR and offers 200 characters of FIFO MEMORY, a DUAL-UART REGENERATOR that also provides local copy during all PRELOAD-RECIRCULATE functions, a WORD CORRECTION circuit that permits an incorrect word to be erased from memory by depressing the local keyboard's BLANK key, VARIABLE CHARACTER RATE and automatic BLANK/LTRS DIDDLE. Character OVERRUN during down-speed conversion is prevented by an automatic CHARACTER RATE OVERRIDE and TEE DEE INHIBIT circuit. Three preset AFSK TONE/SHIFT combinations are selectable from the front panel.

The MPC-1000R (80 characters of memory), MPC-1000CA (Tri-tone AFSK), MPC-1000CRA (Tri-tone Regenerator) and MPC-1000CS (Crypto-Scrambler) are also available.

## RTTY ID GENERATOR

PLUG IN BOARD SAME SIZE AS ST-6 BOARDS.  
EASY INTERFACE TO ST, DT & UT GEAR.  
ACCEPTS PLUS 5 OR 12 VOLT SUPPLY.  
31 CHARACTERS MUST INCLUDE LTRS, FIGS, SPACE, ETC. SUPPLY DESIRED CODING WITH ORDER, FROM COMES CODED **kit \$34.99**

## CW ID KITS

AUTOMATIC RESETABLE 10 MINUTE TIMER.  
SINGLE PLUG IN BOARD SAME SIZE AS DT-600.  
ID INTERFACING TO ST & DT SERIES TU'S  
INCLUDED WITH H. V. INTERFACE FOR DIRECT TRANSMITTER KEYING. VARIABLE SPEED  
OPTION. REQUIRES +5 OR 12 VDC **\$37.90**

## KEYBOARD COVERS

W 14 D 8.3 H 3 \$13.50  
14 " 11.3 " 3 \$14.50  
SHIPPING INCLUDED  
SPECIFY WHITE OR BLACK TOP

## ELECTRONIC PARTS

RESISTORS CAPACITORS DIODES  
TRANSISTORS IC'S SWITCHES  
CABINETS TRIMPOTS METERS  
FUSES TEST CLIPS AND MUCH MORE

## NuData Electronics

104 N. EMERSON ST. STAMP  
MT. PROSPECT, ILL. 60056 BRINGS  
PHONE 312-392-2358 CATALOG

## 10 MINUTE TIMER

ADJUSTABLE FROM 1 TO 15 MINUTES,  
TIME MAY BE EXTENDED. Q OR Q  
OUTPUTS. REQ. +5V **\$8.95 kit.**

## EXPANDABLE PROTOBOARD

IDEAL FOR SMALL PROJECTS  
**\$10.70 ea.**

## TELETYPE REPAIR SERVICE

ANY TELETYPE CORP. MACHINE  
**\$15.00 PLUS PARTS. NON-COMMERICAL WORK ONLY CALL OR WRITE**
